

Freight Presentation Guide

Pallet Quality 'Fit for Purpose'

- Pallets must be appropriate for the product being handled.
- Pallet slats and blocks must be in good condition.
- Make sure there are no nails sticking out.
- Use cardboard to cover the pallet base, which is mandatory for bag traffic.

Secure Freight to Pallet

- Make sure all freight is securely banded and/or wrapped to the pallet base.
- The load should ideally fit entirely within the pallet footprint without overhang.
- Arrange the load so the items interlock securely.
- Consideration should be given to the centre of gravity of the load.
- Ensure the inner packaging provides adequate strength and protection throughout transportation and handling.

Pallet Labelling

At least one of each required label and mark (for Dangerous Goods, if applicable) must be displayed on the outer sides of the freight. Please ensure that all labels are the correct size and comply with regulations. If you are arranging a reverse or third-party collection, the collection point must be provided with all necessary labels so they can be securely attached to the freight before our driver arrives for pickup.

Ensure that accurate consignment weights and dimensions are declared.

Banding

Bag traffic

Blown stretch film wrap

Overhanging freight

Edge guards

Pallet top covers

Drum traffic (200+ Litre drums must be banded).
